

**What's your guess as to
how much the Town of East Hampton
gets from airport revenues:**

\$30 MILLION?

\$20 MILLION?

\$10 MILLION?

**ZERO.
NOTHING.
ZILCH!**

TWENTY YEARS AGO, IN ONE OF THE GREAT BUSINESS BUNGLES OF ALL TIME, THE TOWN OF EAST HAMPTON HANDED OVER 610 ACRES OF THE MOST VALUABLE LAND IN AMERICA – IF NOT THE WORLD – TO THE EAST HAMPTON AIRPORT FOR THE PLEASURE AND CONVENIENCE OF THE 1% AND THE REST OF US BE HANGED! FACT: ANY MONEY THAT COMES IN TO THE AIRPORT CAN ONLY BE USED TO BENEFIT THE AIRPORT!

How about its contribution to the economy?

KEEPING IT SIMPLE: According to the unbiased, independent Economic Impact Analysis commissioned by the Town itself, estimated passenger spending amounts to 1%-3% of the Town's taxable sales revenue. An amount, they say, that's "less than the price of a medium-sized home in East Hampton."

How about jobs?

FACT: According to The Town's Economic Impact Analysis, the airport employs an estimated 15 people full-time and brings in no more than 100 - 230 tourist-related jobs. To be charitable, the "Alliance's" oft-used claim that passenger spending generates "thousands of jobs" is simply a deceptive and self-serving fantasy.

How about pollution?

FACT: Air, water, and noise pollution are the airport's main contributions to the Town of East Hampton. Fact: During takeoffs and landings, airplane emissions contain a variety of noxious air pollutants including carbon dioxide, methane, and nitrous oxide. According to the Environmental Protection Agency, during one hour of flight, a typical private jet emits more carbon into the air that you breathe than a typical car does in one year.

FACT: Aircraft using the East Hampton Airport spew out approximately 51.5 million pounds of carbon emissions each year! The Environmental Conditions Analysis commissioned by the Town concluded that 6% of the Town's harmful emissions are produced by the 1% of the population – which just happens to be the 1% that insist that the airport be maintained for their convenience. We can't eliminate cars, but we can certainly eliminate aircraft.

FACT: The Magothy Aquifer is the Town of East Hampton's sole source of drinkable water. Needless to say, maintaining its purity is essential. The East Hampton Airport sits directly atop the deepest and most critical part of the Aquifer. You hardly need a scientist to tell you that pumping a million gallons of fuel annually, thousands of landings and takeoffs, and the inexcusably unwise practice of testing firefighting foam on airport grounds is not a healthy idea. The New York State Department of Environmental Conservation has detected four different locations on airport property that show evidence of contamination. It is likely that this contamination is responsible for the poisoning of wells in Wainscott. A further investigation is in process at this moment. Remedial action is liable to cost taxpayers tens of millions of dollars. Ah, but of course somebody is profiting from pumping all that fuel: primarily it's the one single operator, Sound Aircraft Services.
